Fedora Installer

Installation requires partitioning of your hard drive. By default, a partitioning layout is chosen which is reasonable for most users. You can either choose to use this or

- Remove all partitions on selected drives and create default layout
- Remove Linux partitions on selected drives and create default layout
- Resize existing partition and create default layout in free space
- Use free space on selected drives and create default layout
- Create custom layout**

<input checked="" type="checkbox"/>	sda	76317 MB	ATA WDC WD800BB-00JH
-------------------------------------	-----	----------	----------------------

Advanced storage configuration

What drive would you like to boot this installation from?

sda 76317 MB ATA WDC WD800BB-00JH

☐ Review and modify partitioning layout

Fedora Installer

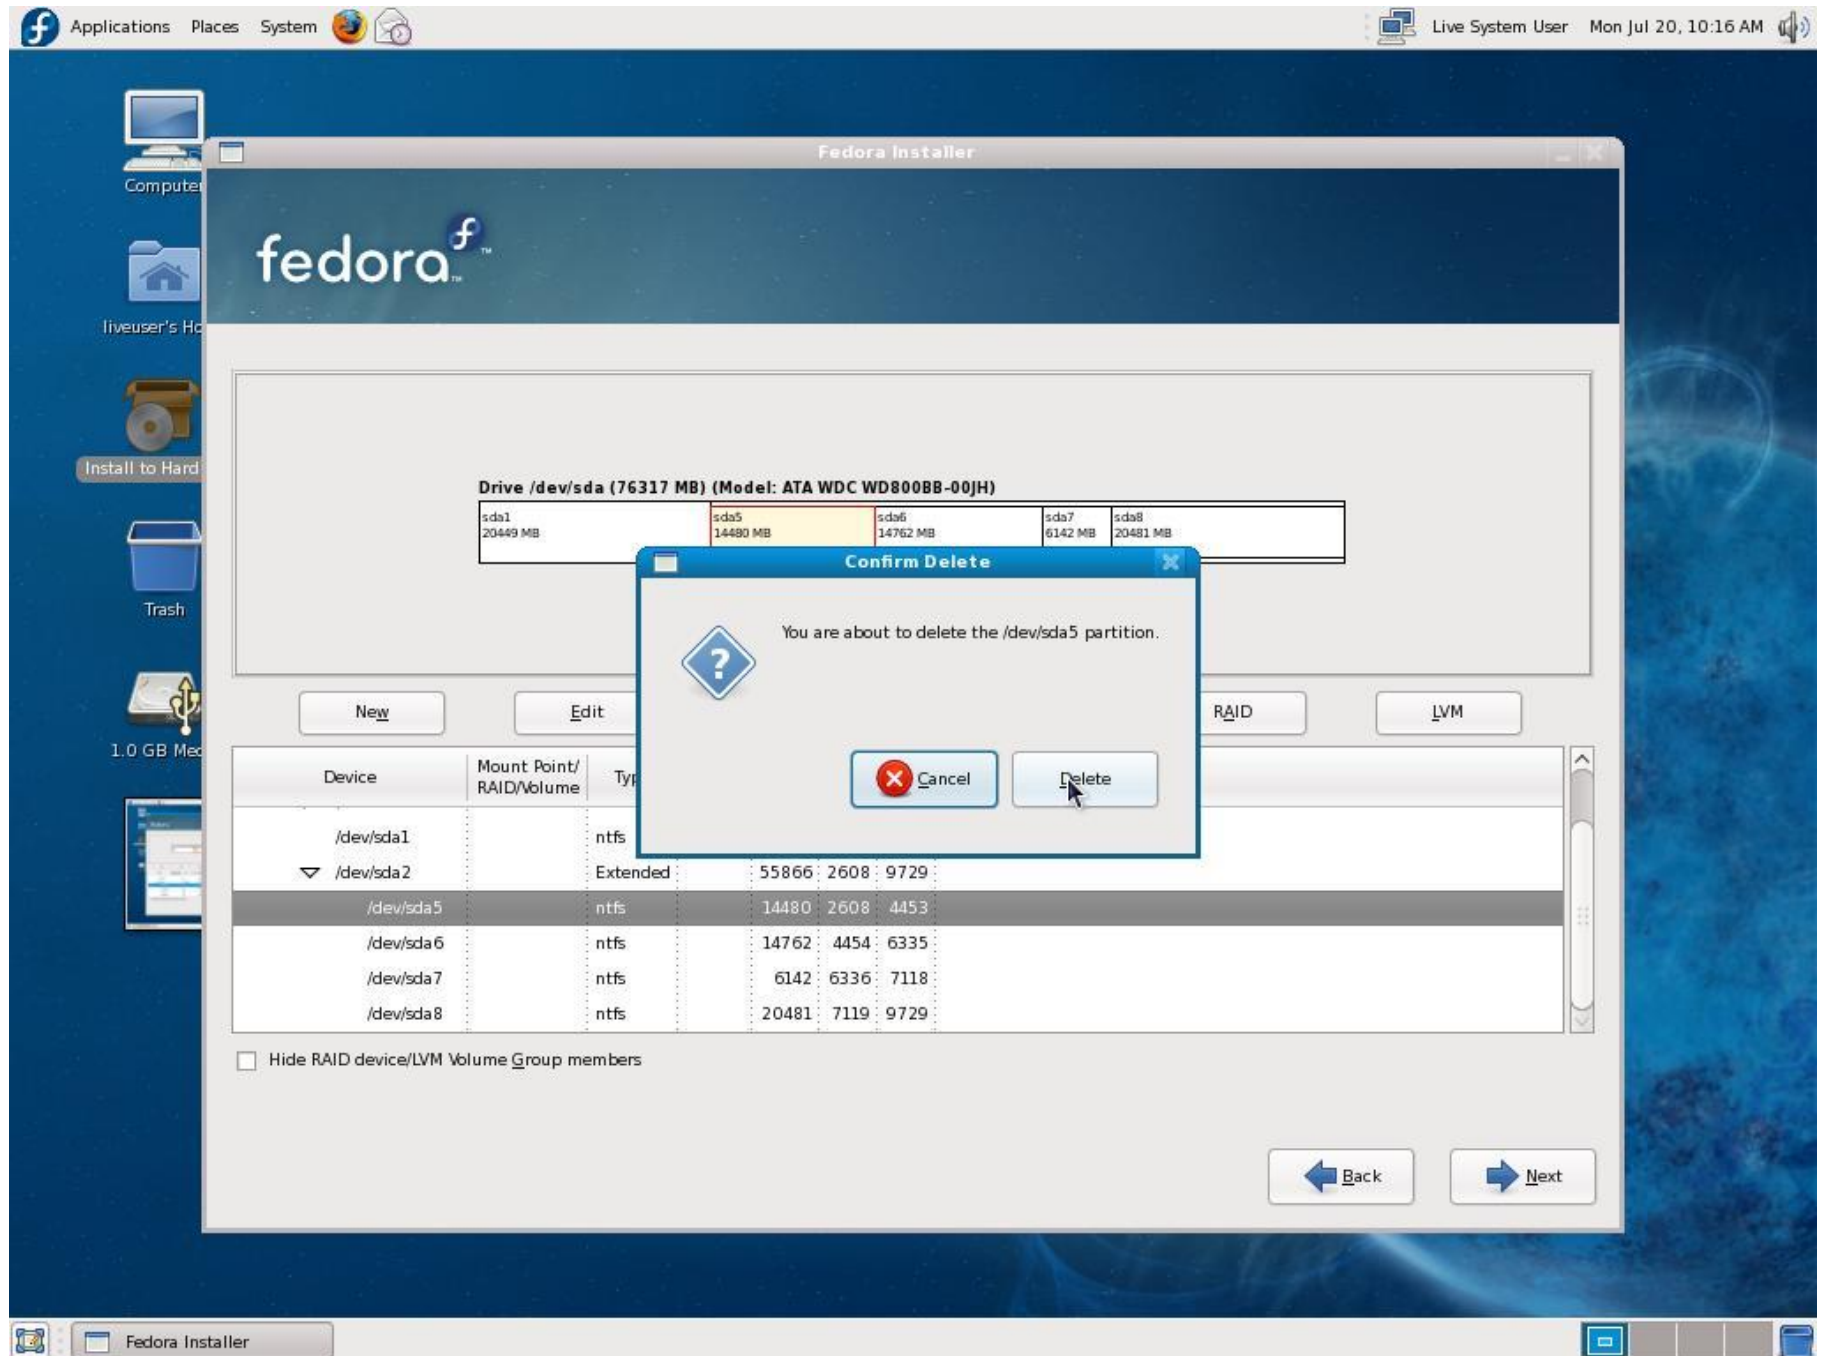

9. We will now our Linux partitions to install on it

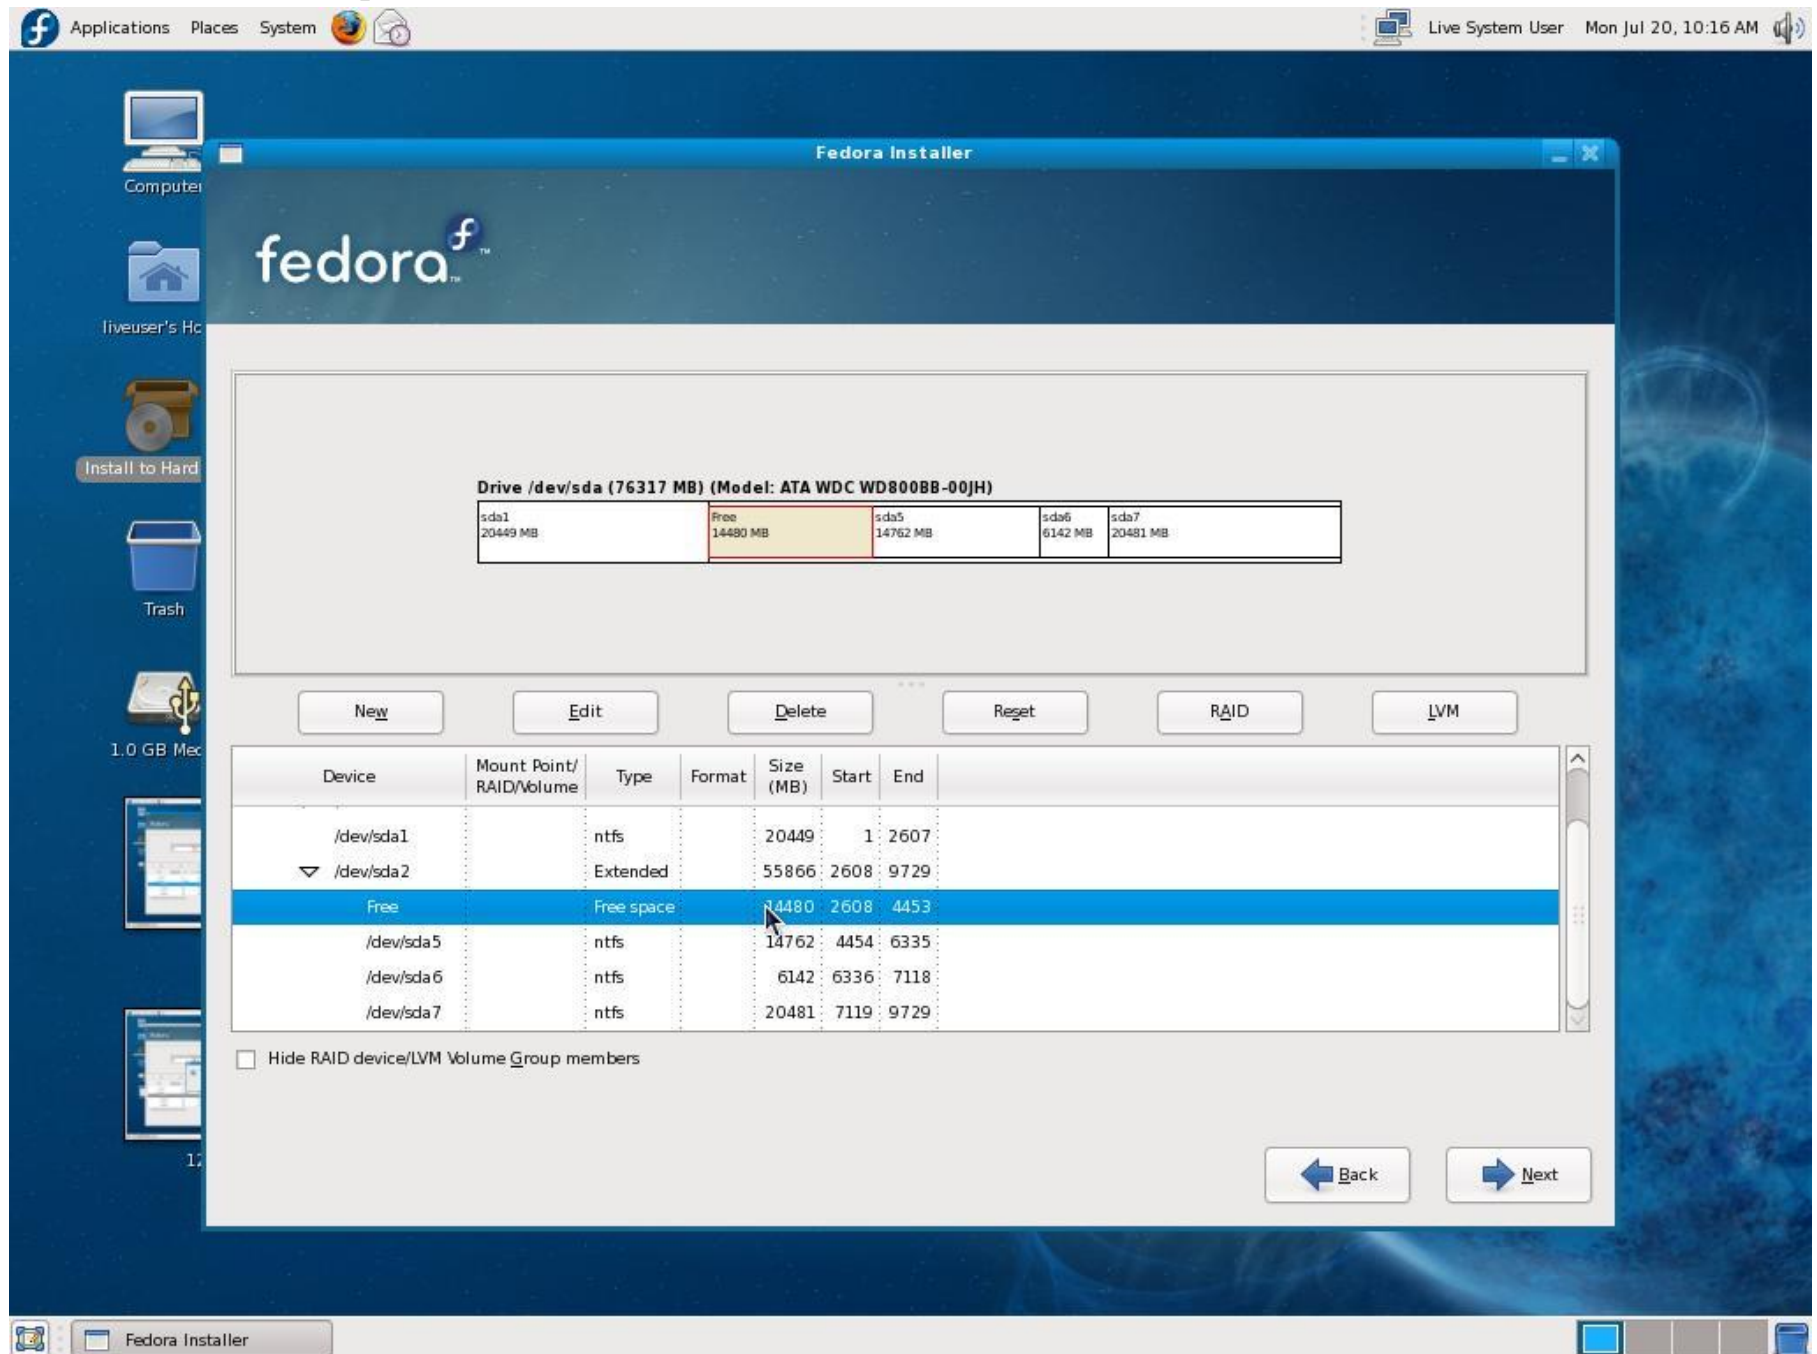

10.Delete the drive you have previously determined and delete it by pressing (Delete)

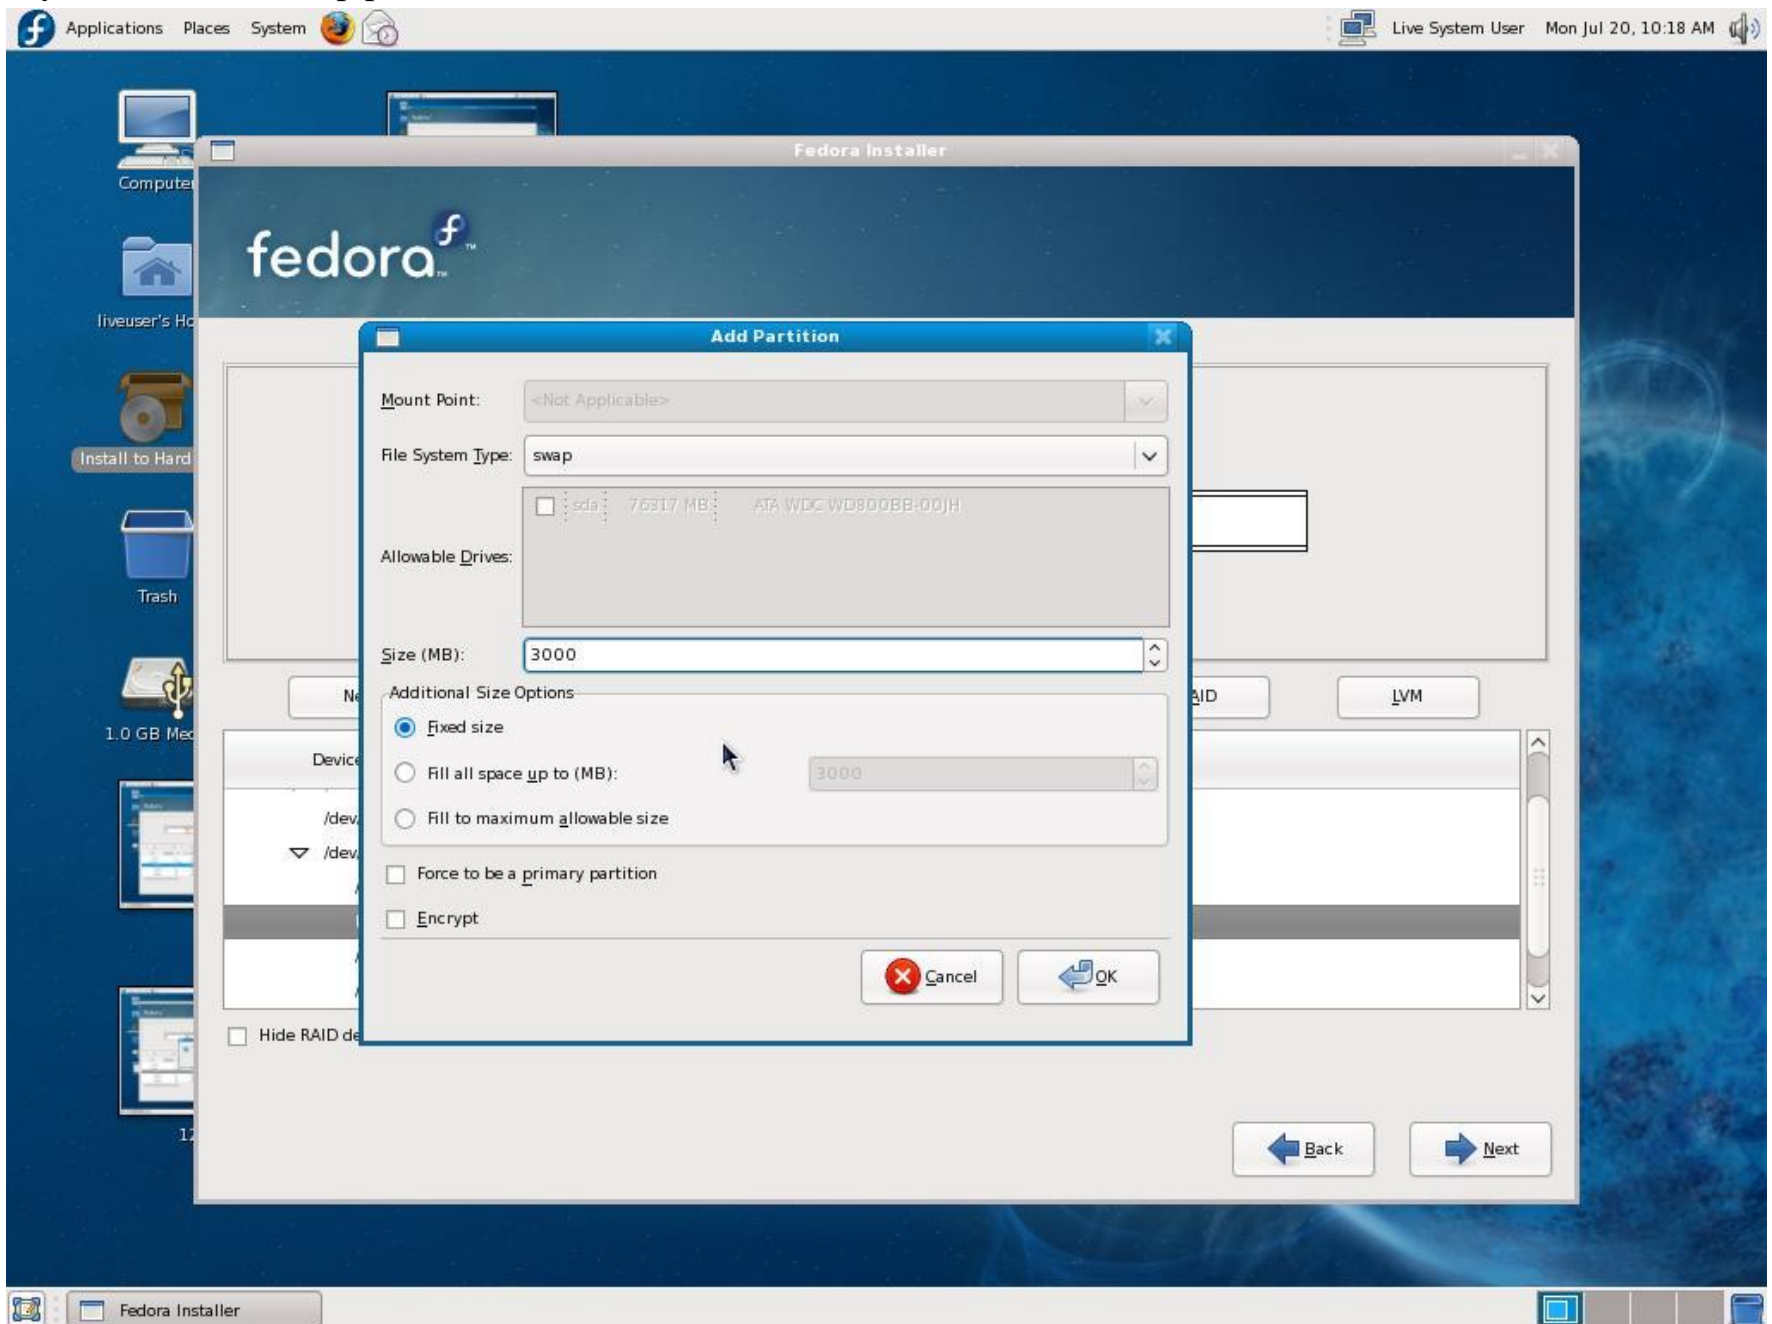

11. Confirm the delete order by choosing (Delete) in the confirmation message

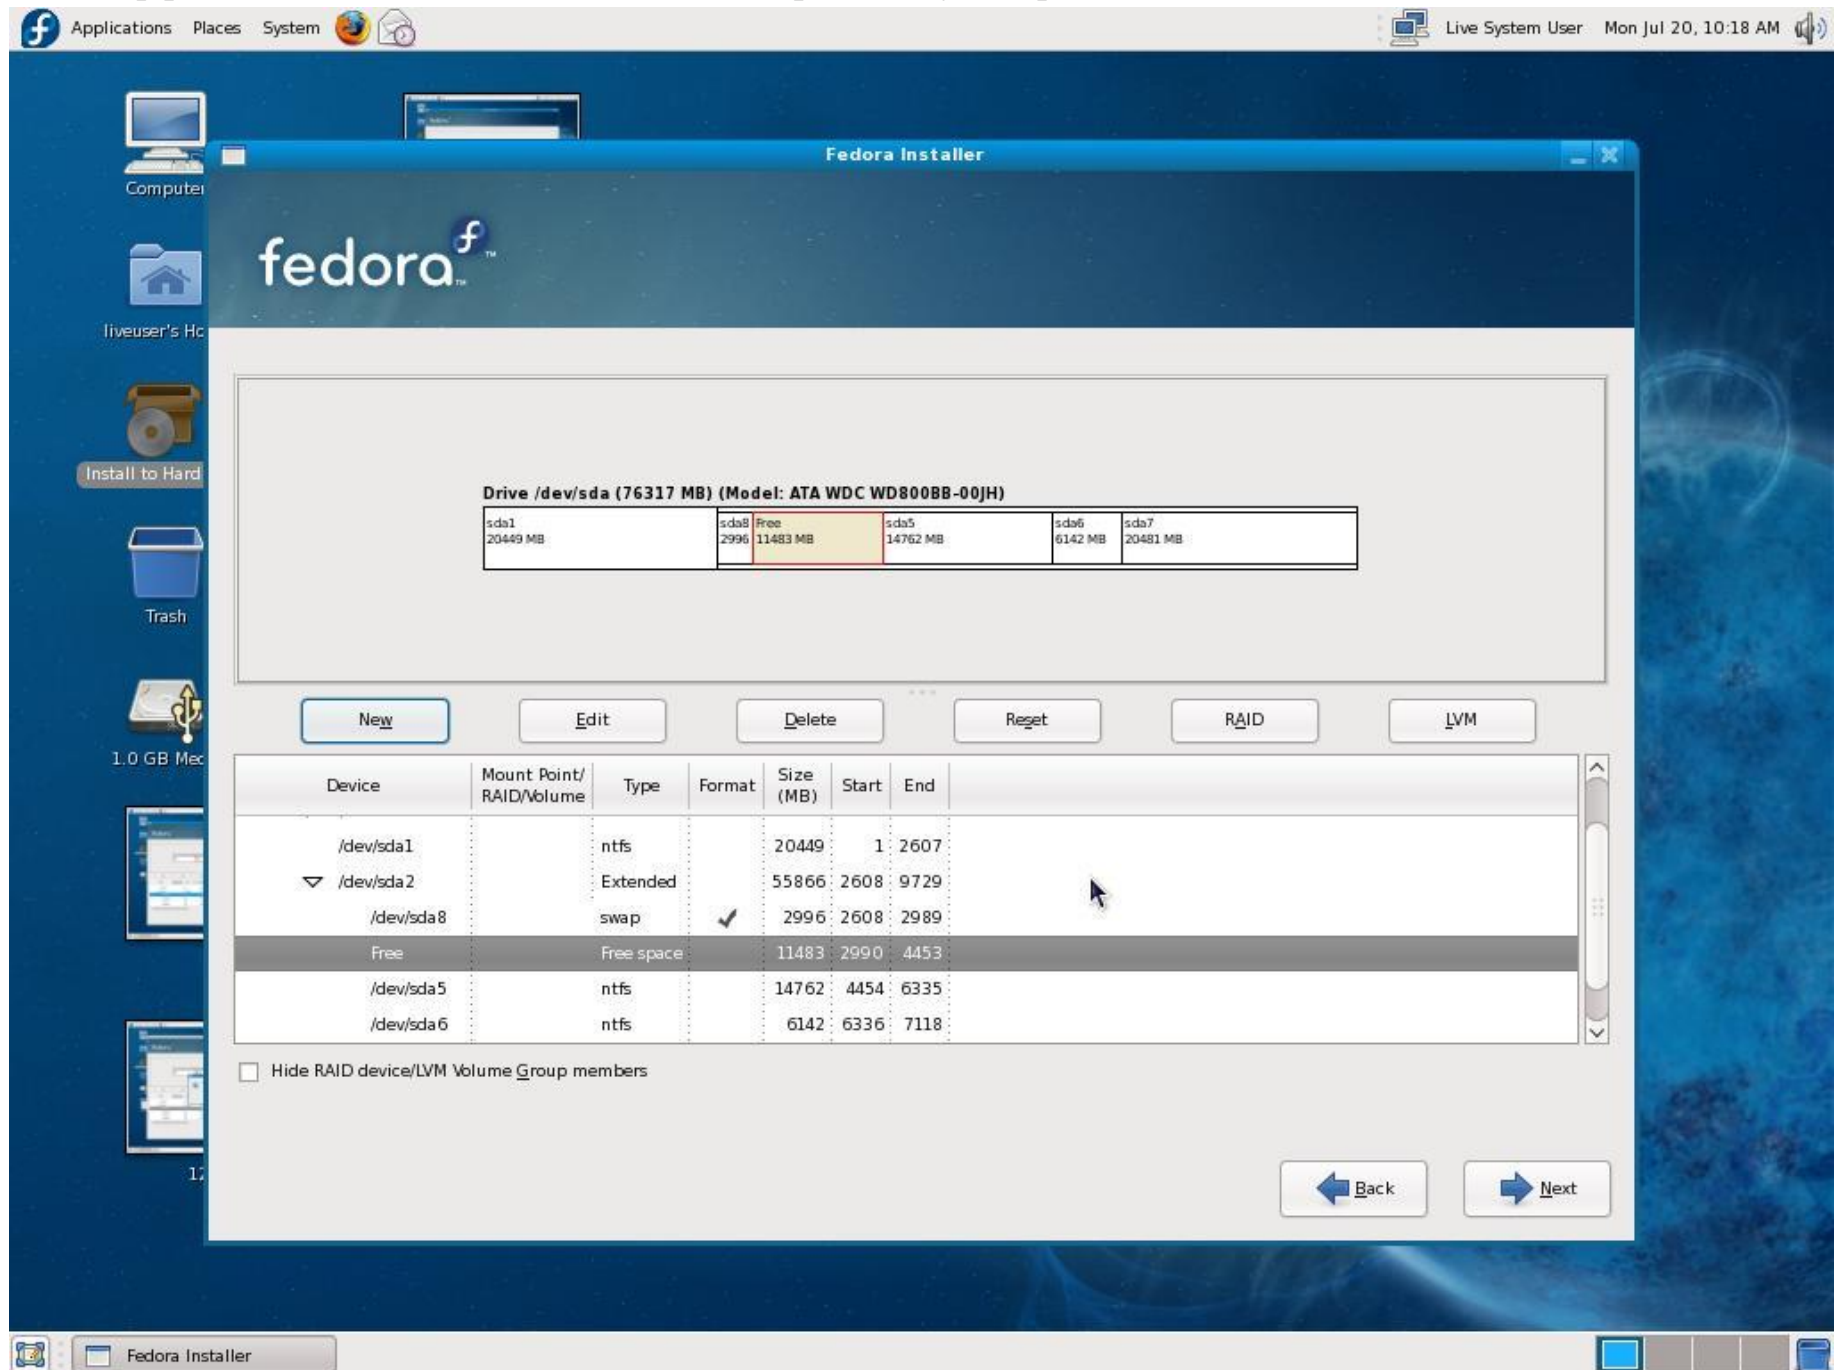

12. We have now our free space on the HD

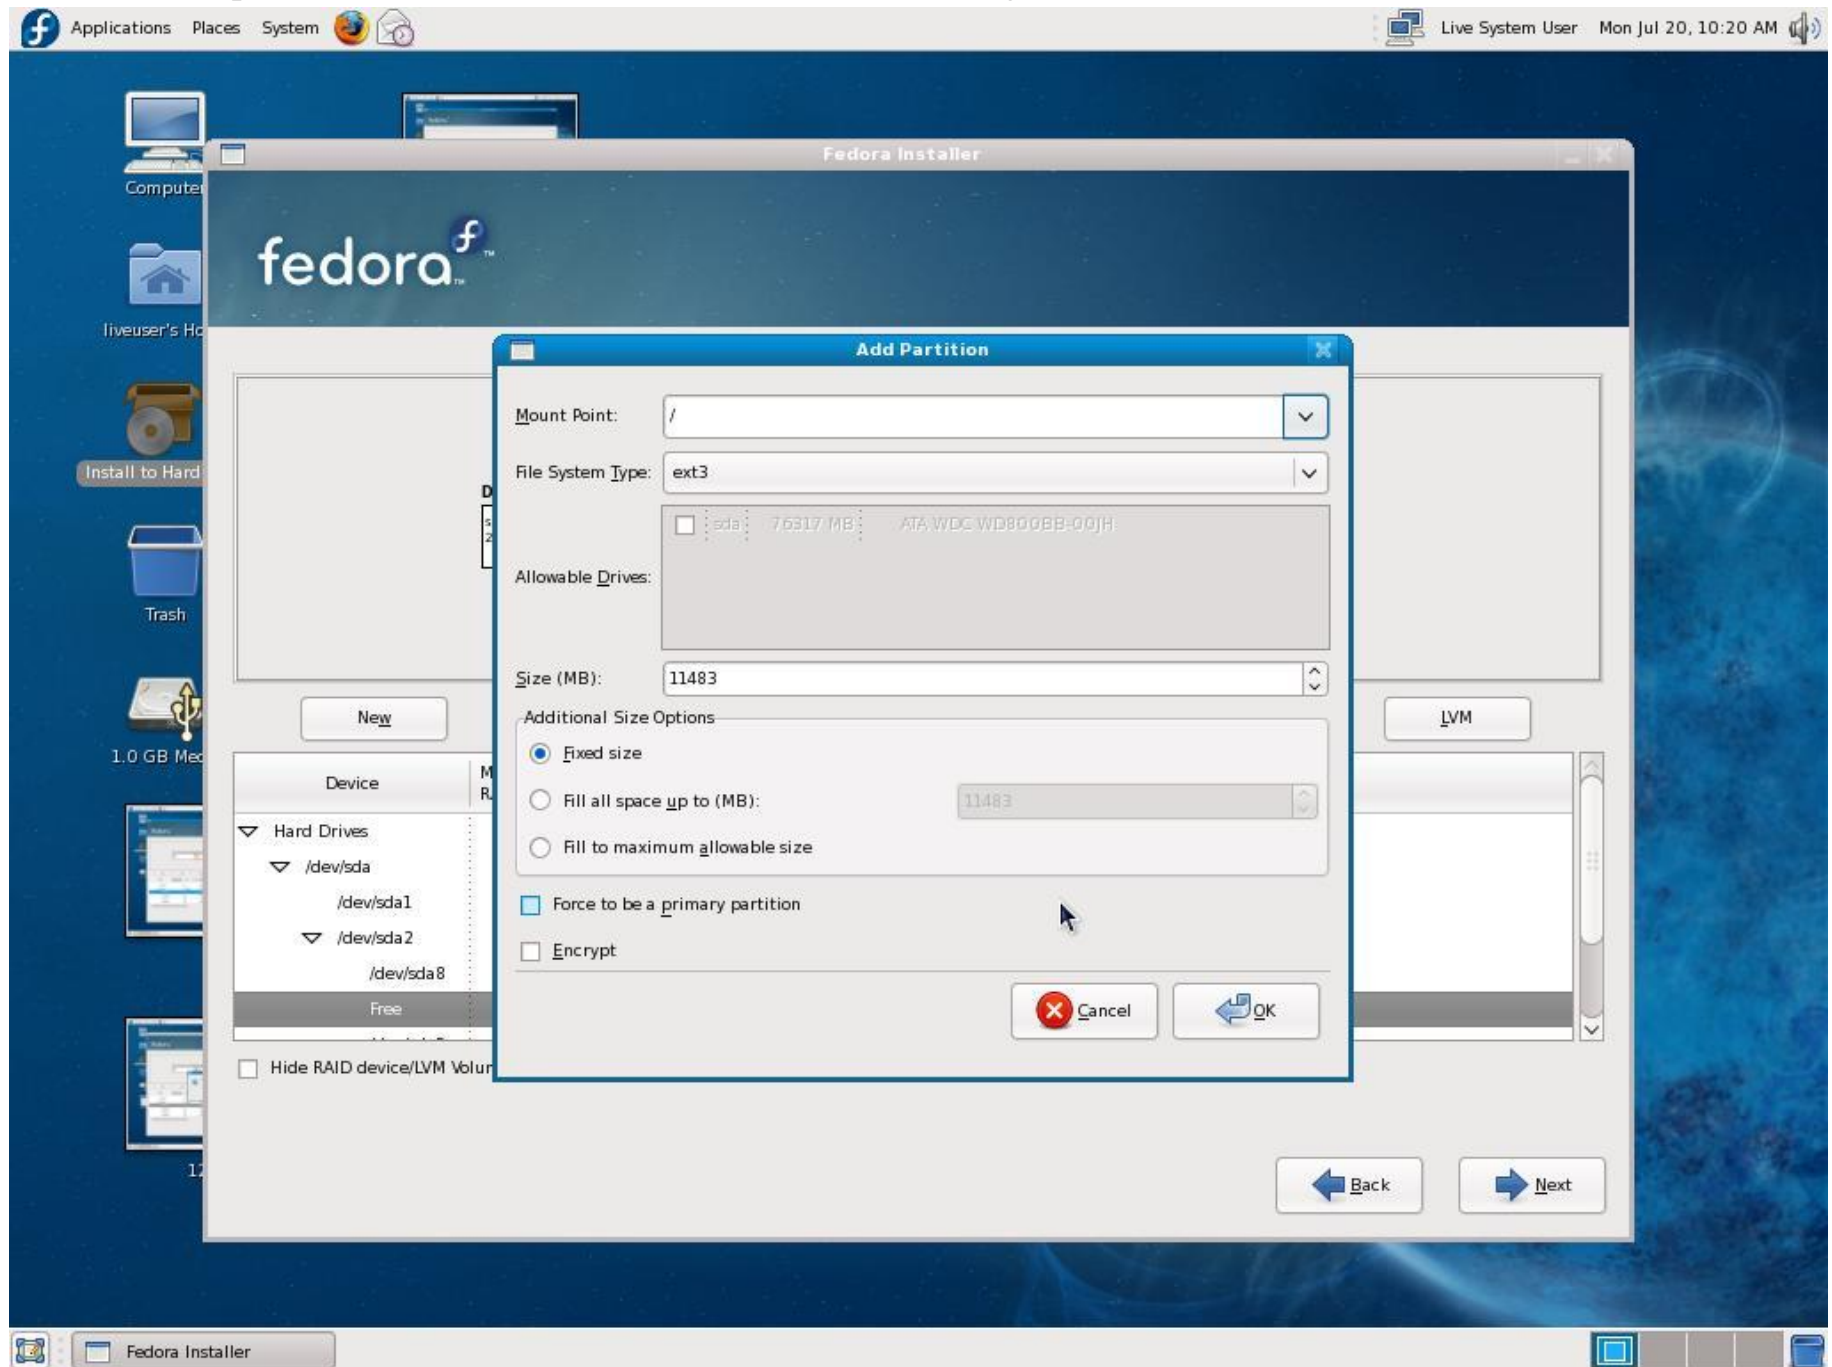

13. Press on the free space and choose the (New) button and choose the configurations shown in the picture (drive space is up to you) to make a Swap partition

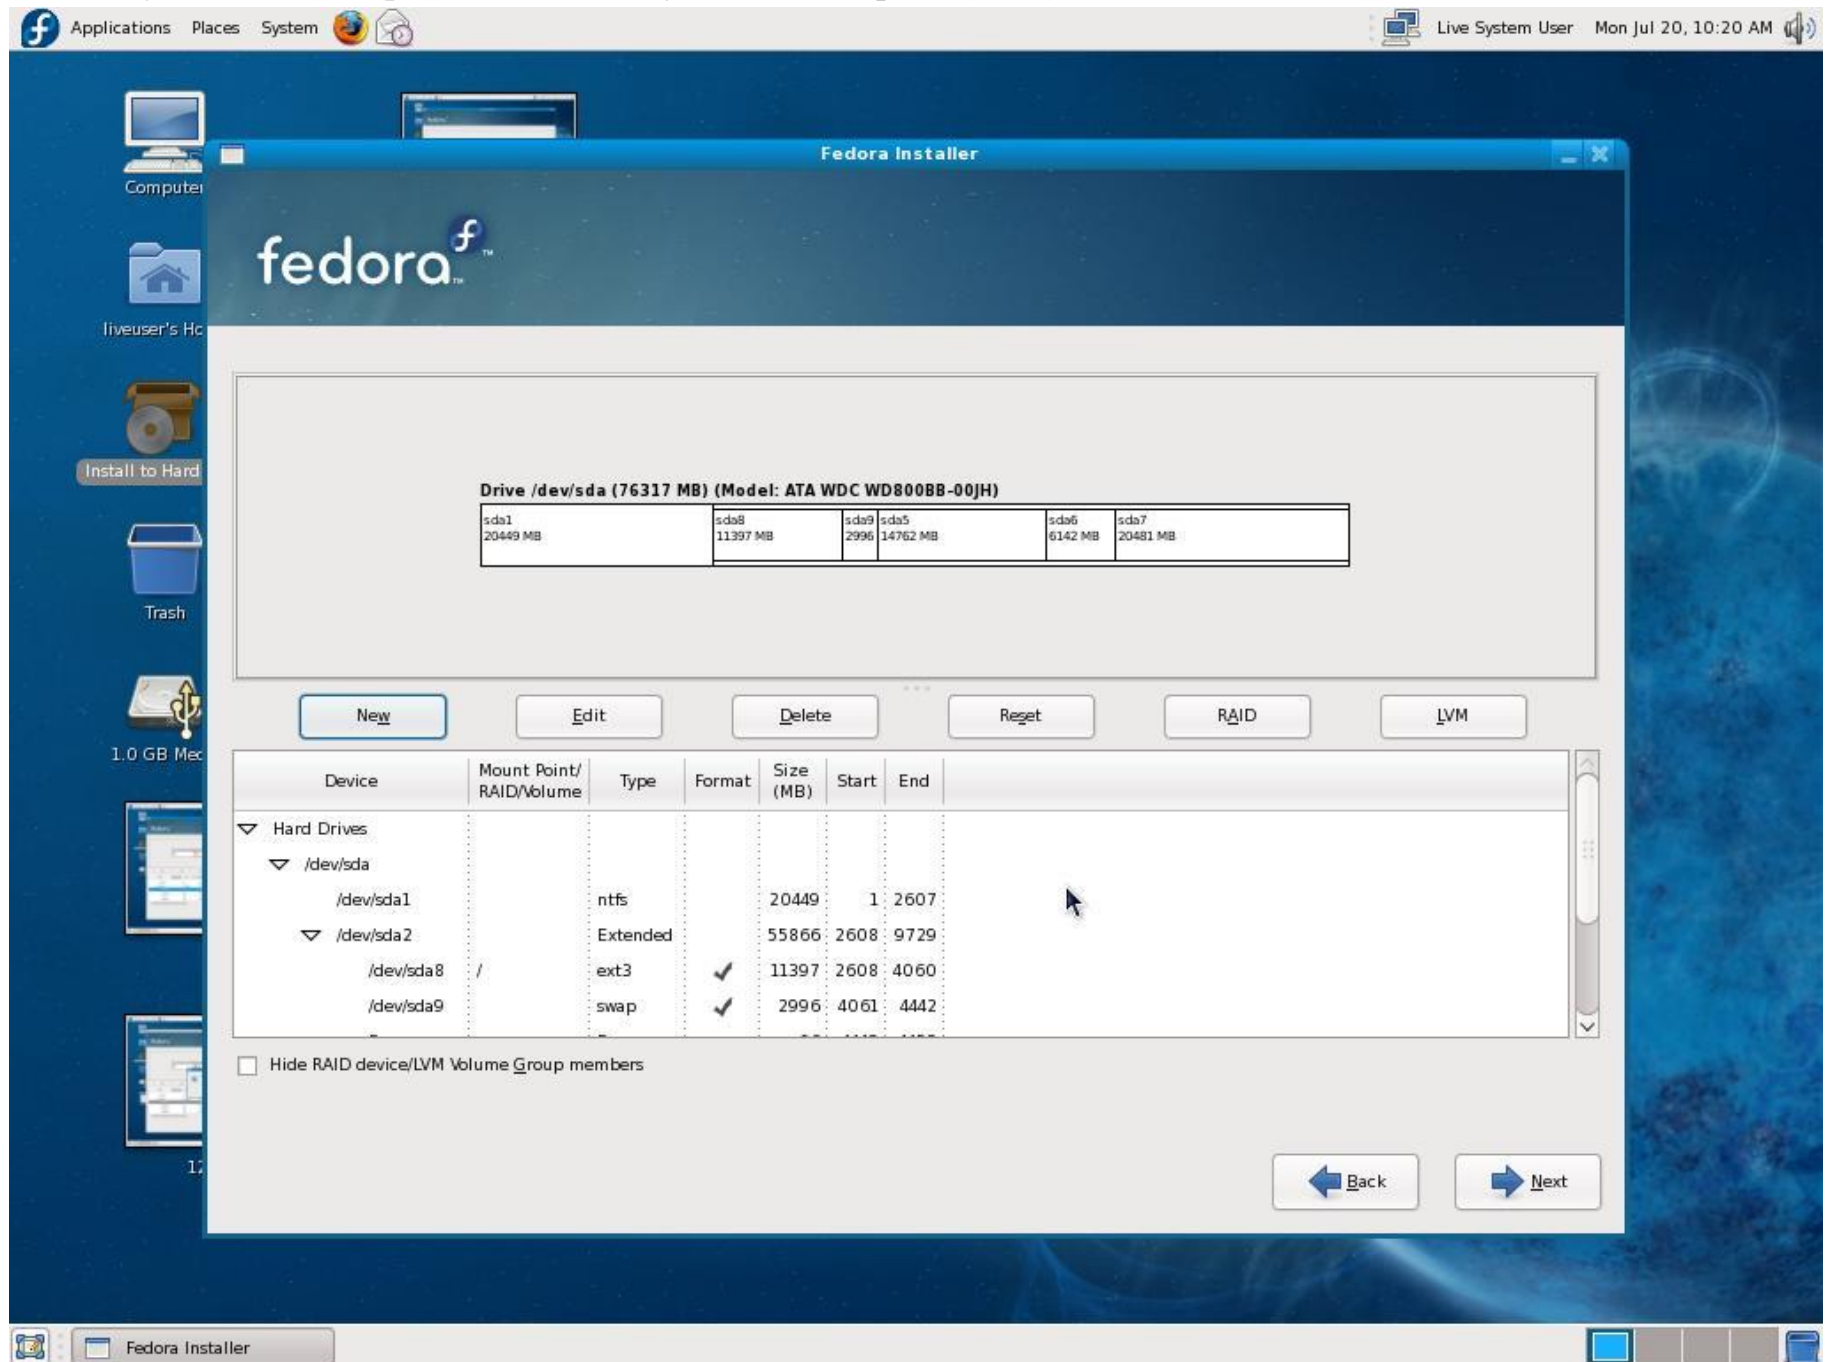

14. Our Swap partition is created and we have still free space for system partition

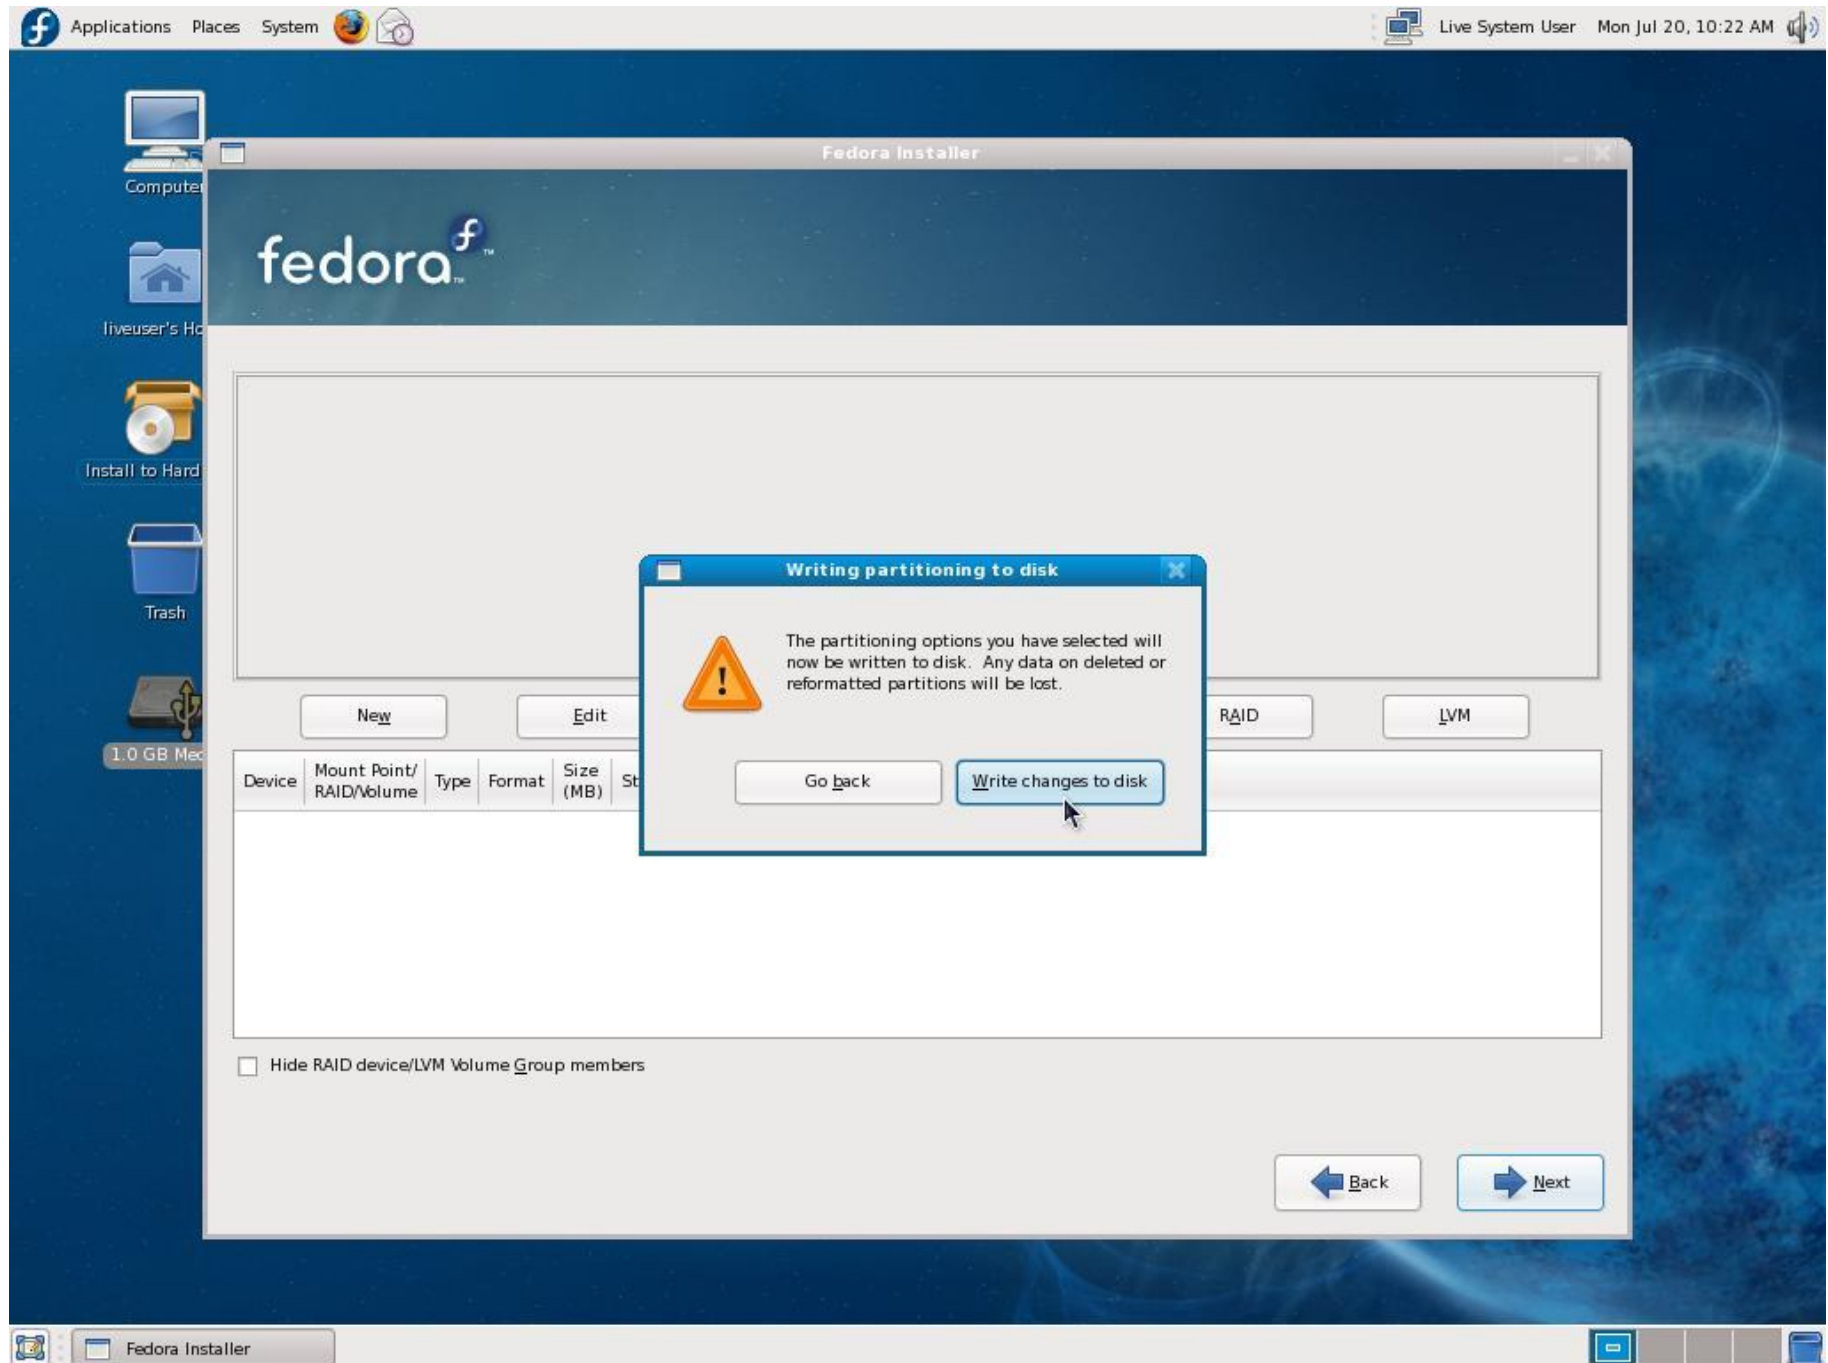

15. Click the free space and choose (New) button and choose the configurations shown

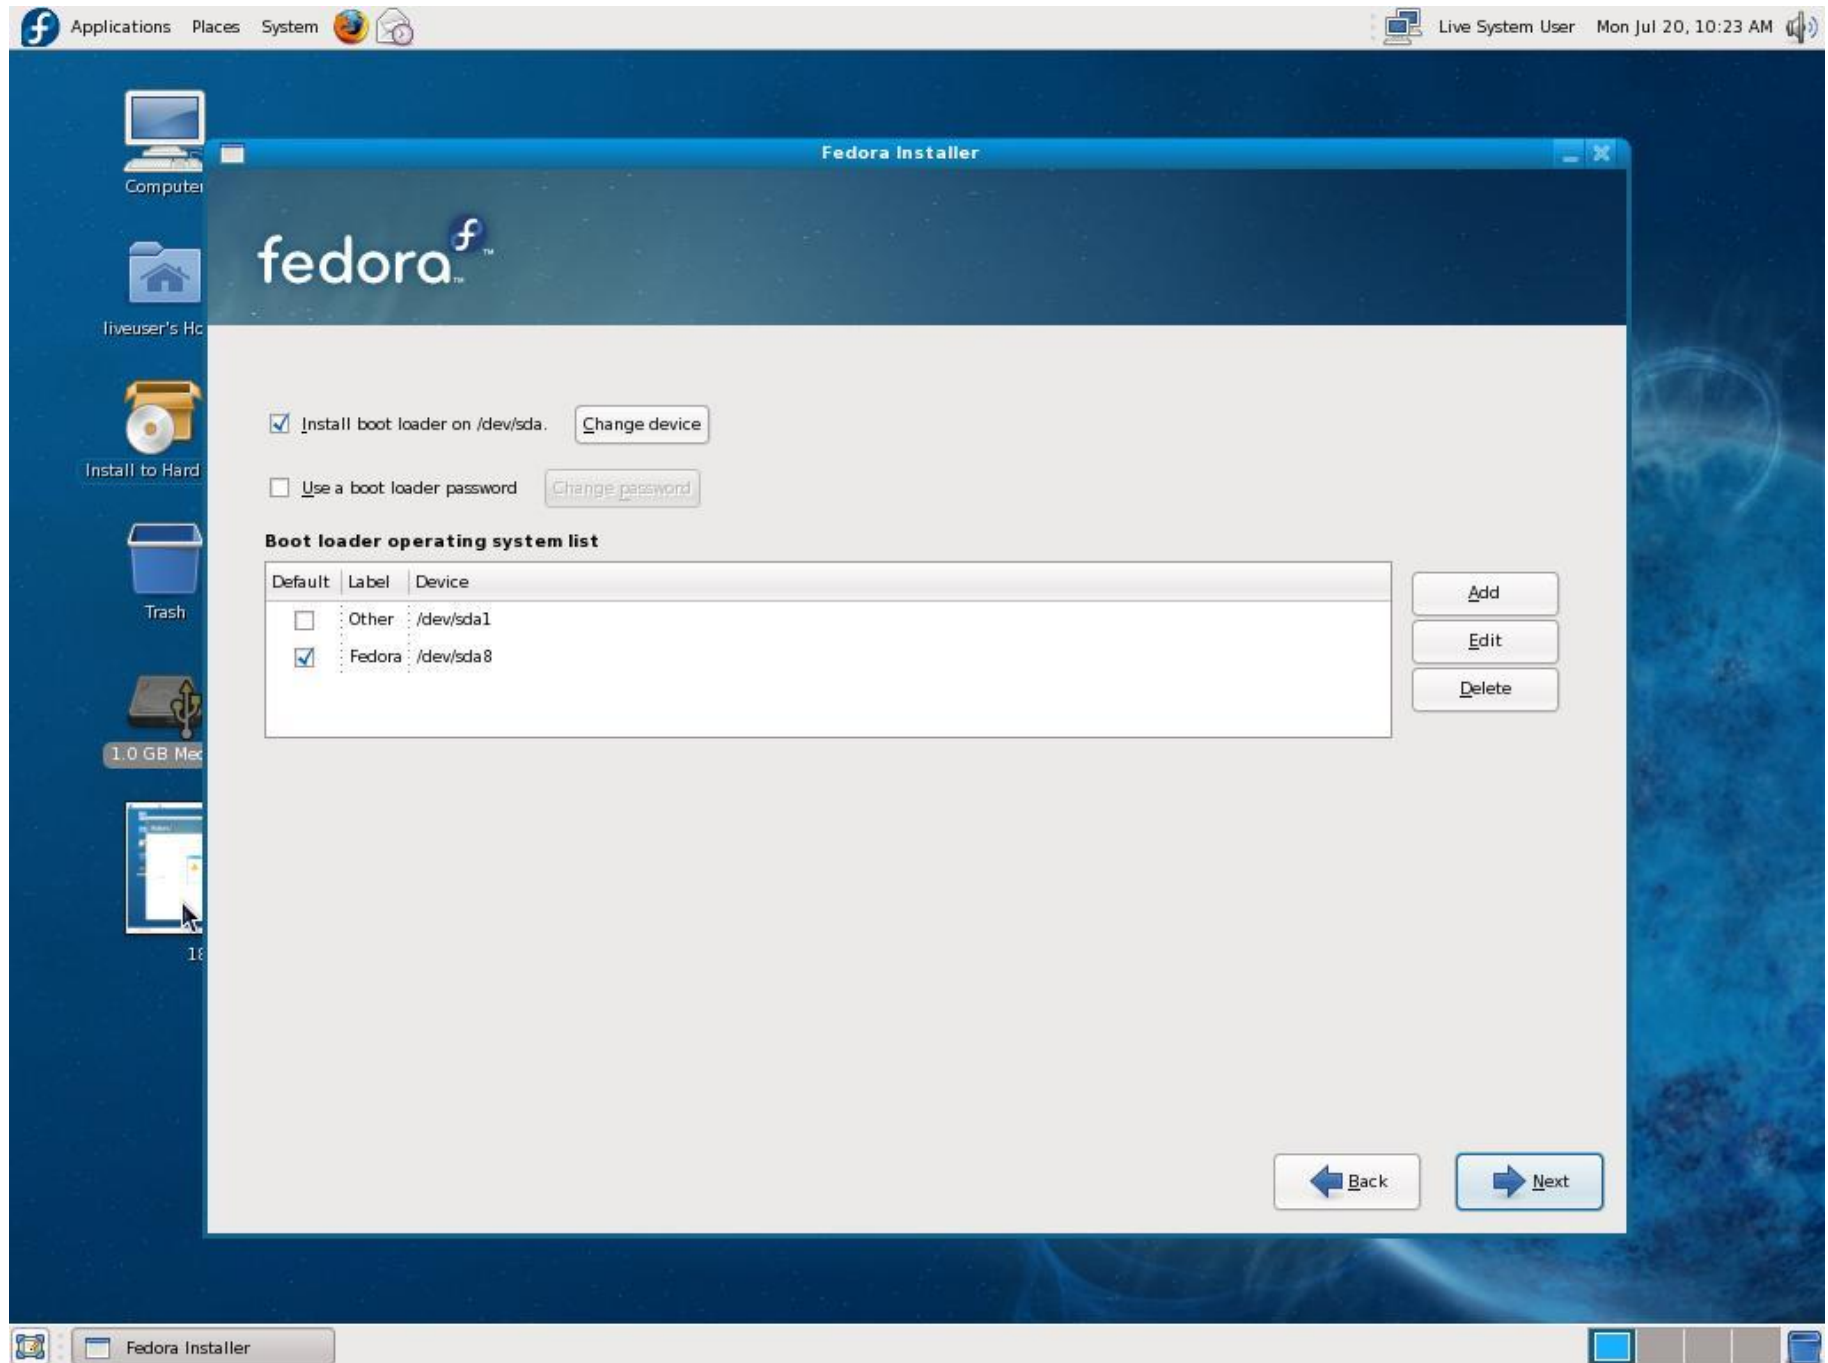

16. We have just created our partitions and ready to install ... press (Next)

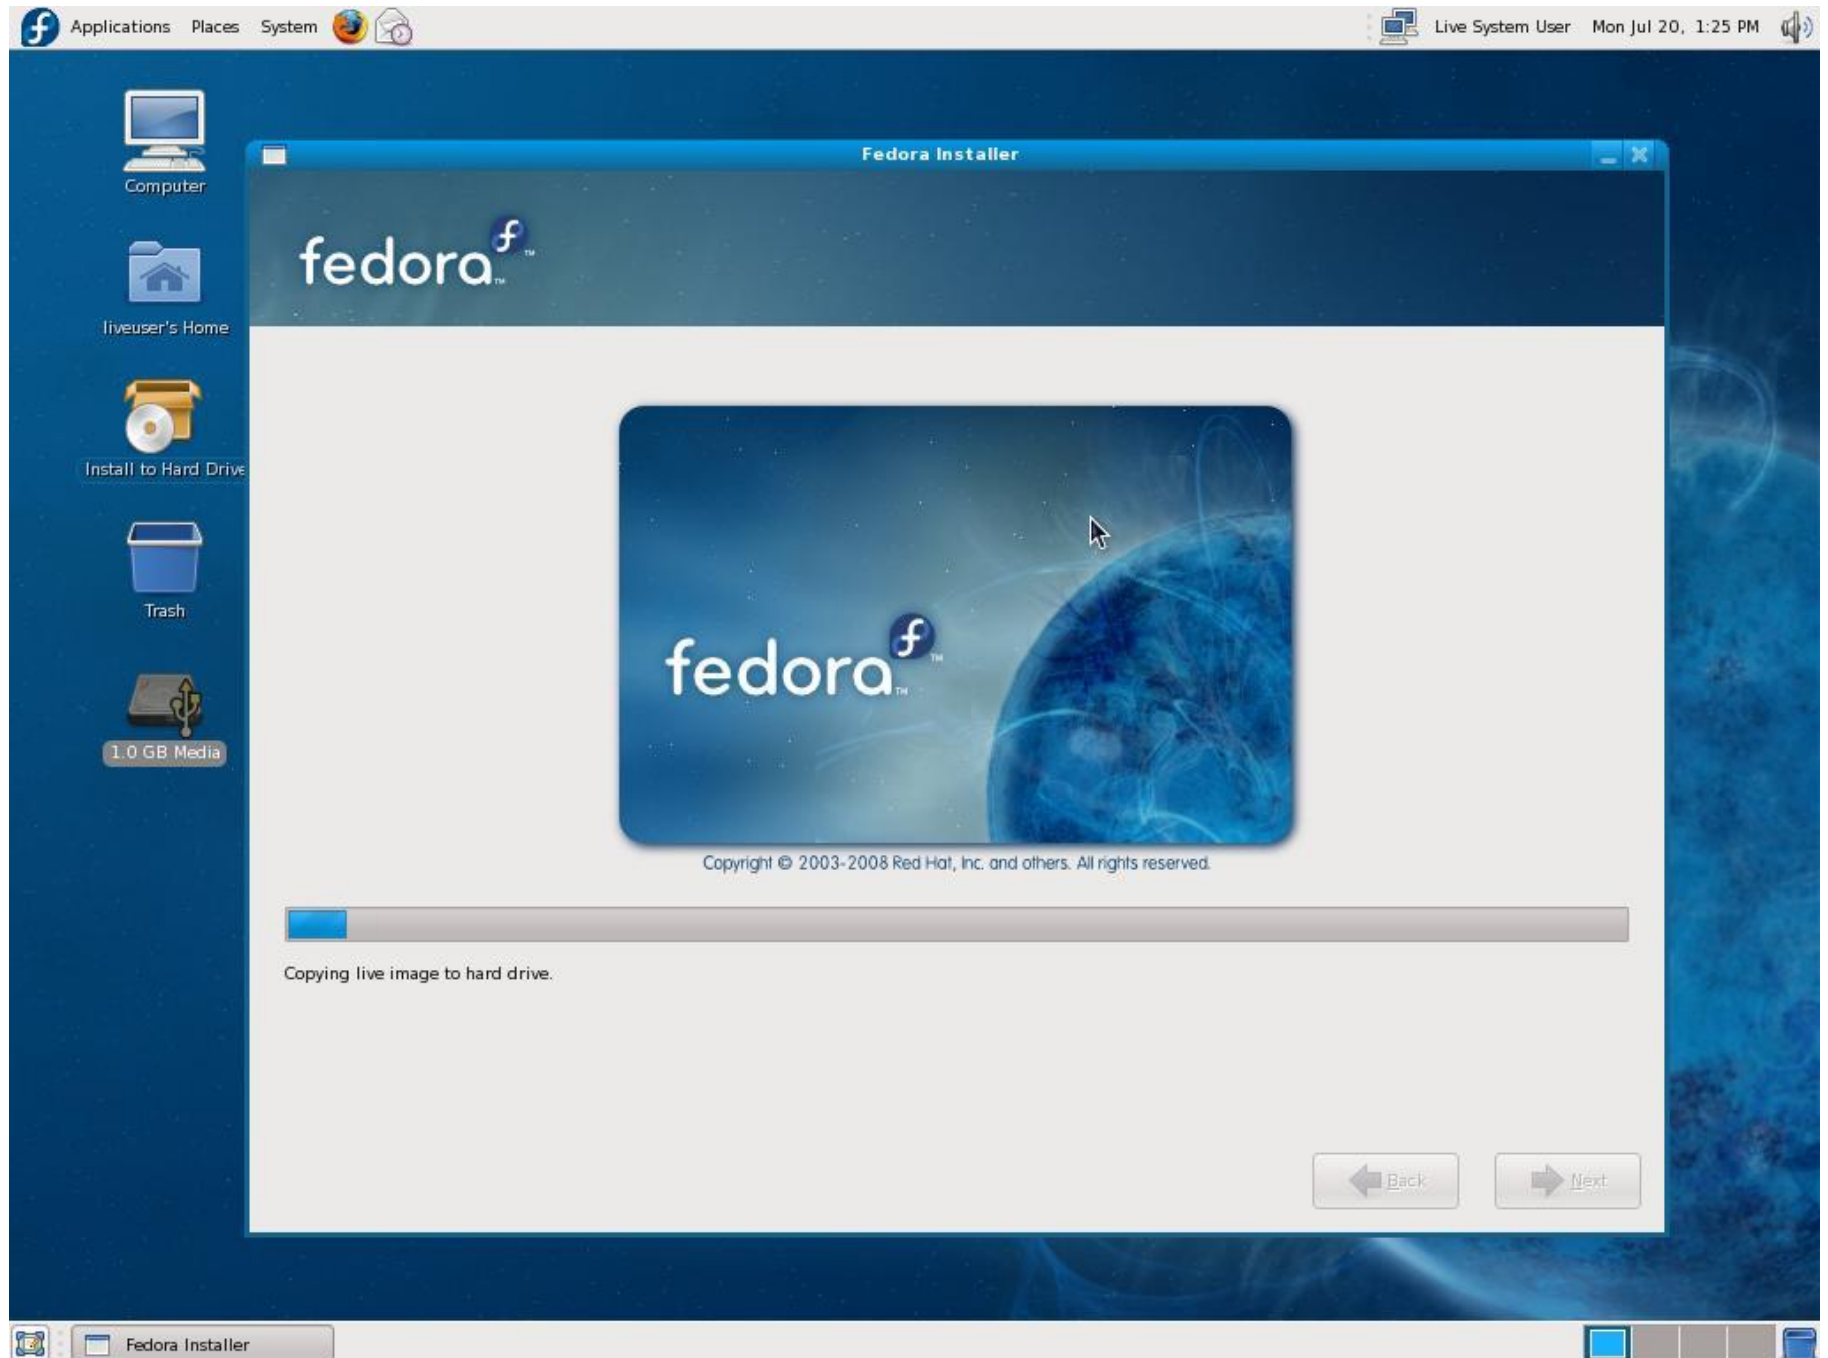

17. Confirm your configurations by choosing (Write changes to desk)

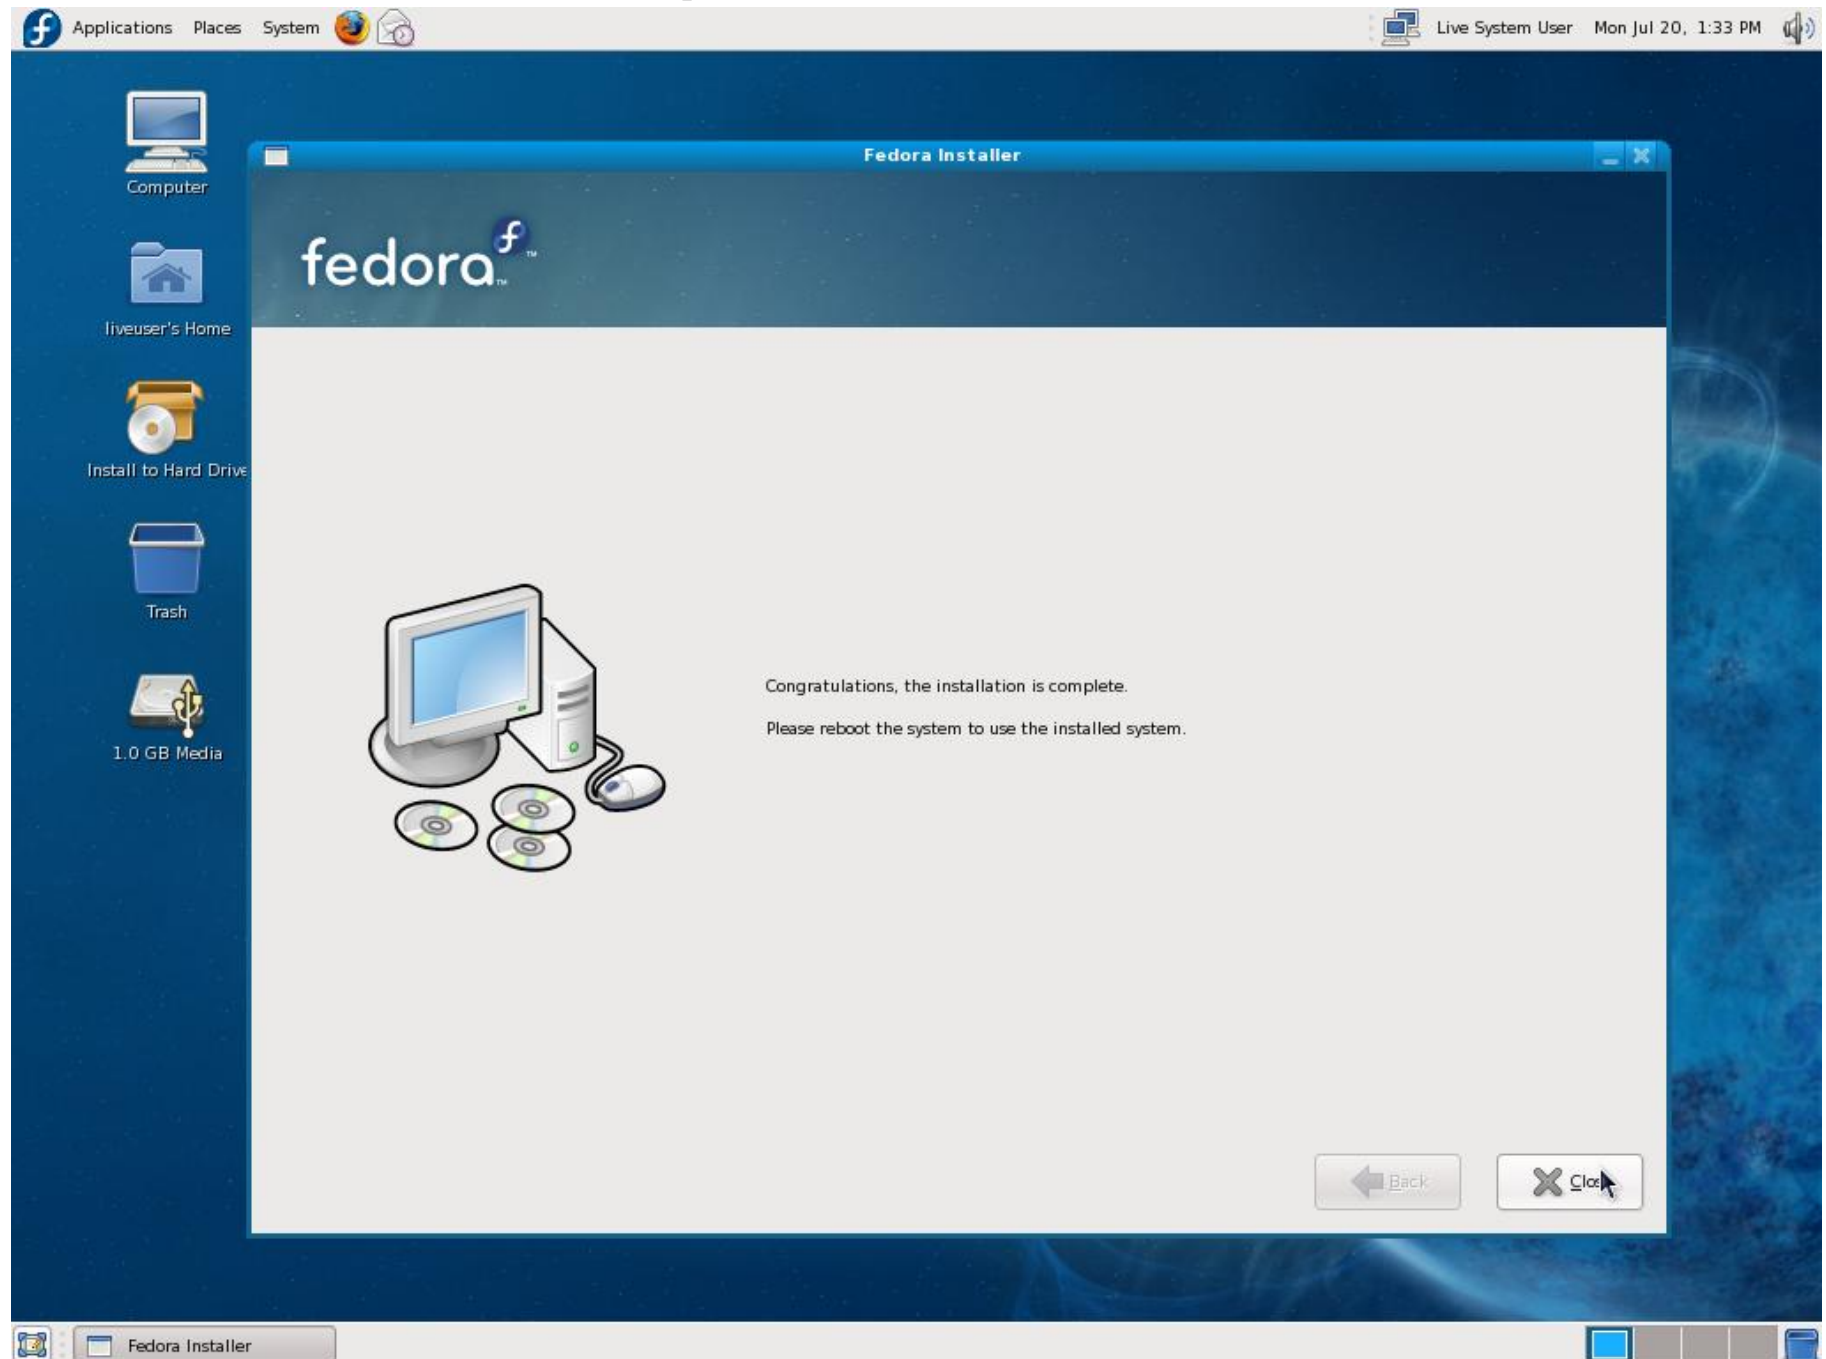

18. Choose your boot loader (Fedora is preferred) and press (Next)

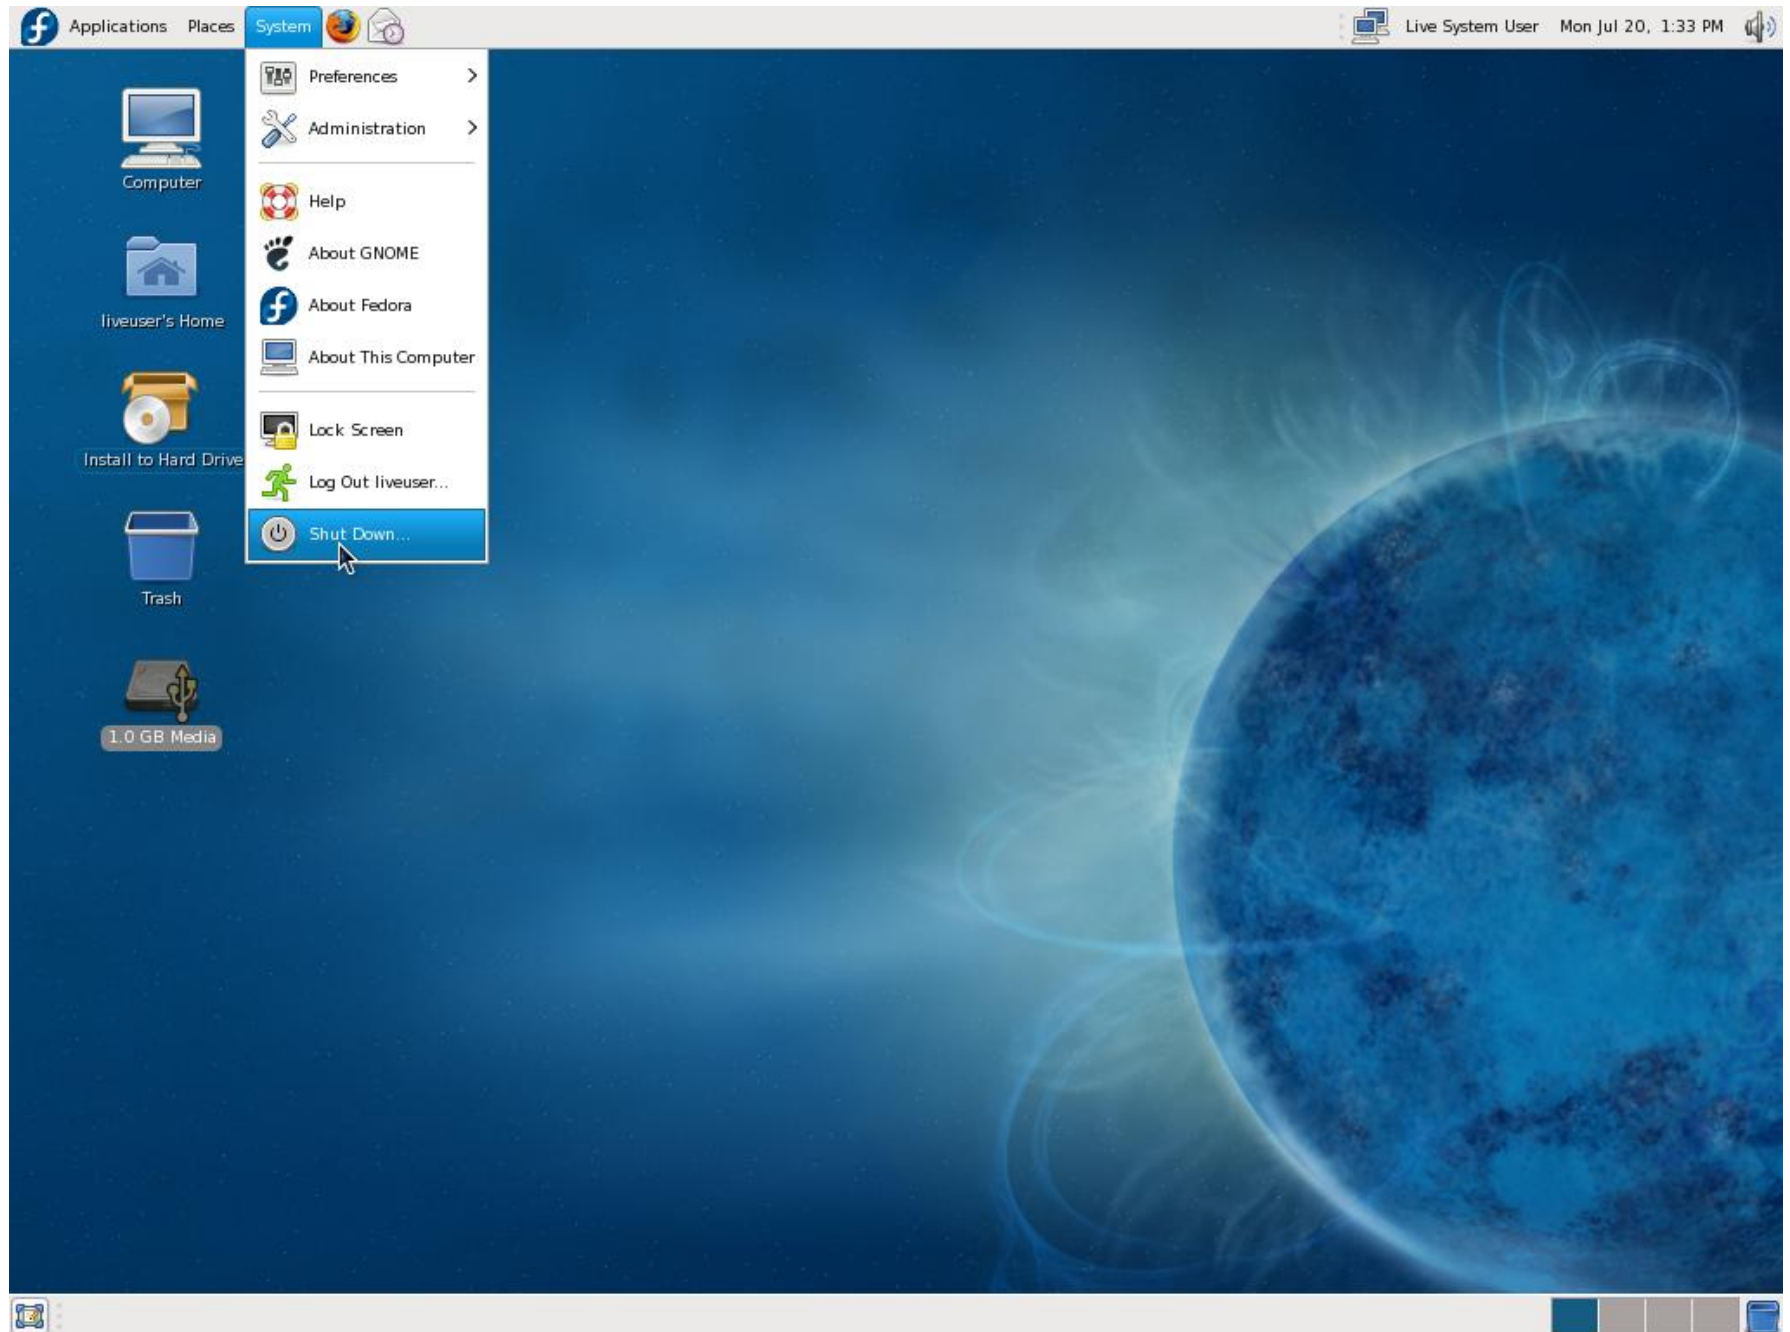

19. You have just begun your installation

20. Now we have almost finished installation ... press (Close)

21.Reboot your system to choose you settings before starting the system

After starting the system you will choose your user name and password and time settings ... etc

Then you will be able to work to the system
